

Deltapath Delivers High Definition Voice on VoIP without Breaking The Pipe

Embargoed for release on 17 June, 2008, CommunicAsia 2008 Singapore.

Hong Kong, China - 17th June, 2008 – Deltapath, the pioneer innovator in pure IP based unified communications systems for enterprises and service providers, announces its latest release of frSIP® PBX with High Definition Voice.

The 2.8.2 release of frSIP® provides customers with Polycom HD Voice technology which delivers twice the clarity of ordinary phone calls by using a sampling rate of 16KHz, which is double the traditional 8KHz used in legacy telephone lines and VoIP. More importantly, the improved sound quality does not require additional bandwidth.

David Liu, Founder and CEO of Deltapath said, "Finally VoIP is better than traditional telephone lines. With HD voice, it is so crystal clear you can even run your own music jukebox from your phone system!"

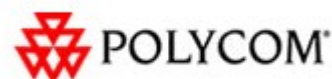

Initially released in 2004, the second generation frSIP® PBX 2.8.2 is the latest release of Deltapath's flagship product. frSIP® PBX is also the first Session Initiated Protocol (SIP) based PBX from Asia to be certified through the Polycom VoIP Field Verified Program.

"We are very pleased to announce that Deltapath is the first company from the Asia Pacific region to join our worldwide ecosystem of VOIP partners " said Peter White, Asia Pacific VOIP Sales Director, Polycom. "By working closely with Polycom, we are able to bring many of VoIP promised benefits to customers, including High Definition Voice in particular", Liu added.

Built on the open standard SIP platform, the frSIP PBX provides a (compelling, robust, feature-packed, competitive) alternative to closed proprietary solutions. frSIP® PBX customers not only enjoys the benefits of multi SIP vendor support for phones and gateways; they also enjoy a revolutionary licensing scheme, unlimited number users per site. This truly removes the artificial "port limit" which was supposed to be one of the major benefits in IP Telephony until most of the major manufacturers introduced per user base licensing scheme to charge its customers. At present, there are over 100 frSIP® PBX systems in 16 countries and used by Global 1000 companies.

Highlight of Product Features:

- Support for High Definition Voice G722 Codec
- Inter and intra site user roaming
- DTMF integration: allowing users on the road to enjoy the similar set of system features and VoIP from their mobile.
- Automatic trunk fail-over. E.g. fail over to PSTN when VoIP network is down.
- System redundancy- hot standby server taking over primary when it fails
- Ability to be remotely monitored, backup, and maintained by Deltapath NOC staff.
- Centralized monitoring interface for NOC staff, resellers, and customers
- Tightly integrated modules to provide billing, call recording, CRM, Call Queuing without third party software or servers.
- Multi vendor support: Support phones from Polycom, Cisco, Grandstream, snom, and Linksys Gateways from Quintum.
